Summary

CS Engineering student at KIIT (2027 graduate) specializing in scalable backend systems and intelligent AI/ML applications. Passionate about engineering robust solutions using Python, Java, and RESTful architectures, with hands on experience building GenAI tools and enterprise level applications. Driven to bridge the gap between complex algorithms and real-world software.

Experience (Internship)

Software Development Intern – [Prodevans Technologies Pvt. Ltd.](#)

May 2026 – Present

- Developing an AI assistant for ZTrust: Currently building a smart, agent-driven chatbot for the company's core product, ZTrust, designed to help users interact with the platform more intuitively.
- Implementing document search (RAG): Integrated Retrieval-Augmented Generation (RAG) into the chatbot so it can instantly search through ZTrust's documentation and provide accurate, helpful answers to user questions.
- Connecting multiple AI agents: Building a backend architecture that links different AI agents together, allowing the chatbot to smoothly handle a variety of tasks like fetching live system metrics, drawing graphs, and answering FAQs all in a single conversation.
- Learning modern AI workflows: Gained hands on experience designing autonomous AI agents, learning how to write prompts that guide them to make decisions and use external tools on their own.

Education

Kalinga Institute Of Industrial Technology

July 2023 - Jun 2027

B.Tech. in Computer Science and Engineering

CGPA: 8.58

Relevant Coursework: OOPS, DBMS, DSA, OS, Computer Networks, ML/AI, Software Engineering

Skills

- **Languages:** Python, Java, SQL, JavaScript
- **Web & Backend:** Flask, FastAPI, REST API Development, JSON Handling, Microservices Architecture, HTML, CSS
- **ML/AI:** Scikit-learn, TensorFlow, Pandas, NumPy, NLP, CNN, TF-IDF, LLM Workflows, Prompt Engineering
- **Databases:** MySQL, PostgreSQL, SQLite, MongoDB
- **Developer Tools:** Git, GitHub, GitHub Copilot, Postman, Jupyter Notebook, VS Code
- **Cloud Software Engineering:** SDLC, Agile Scrum, CI/CD Fundamentals

Projects

FinWise - AI Financial Copilot | Python, Flask, Google Gemini API, SQLite, JavaScript)

[Github Link](#)

- Engineered a full-stack AI expense tracking platform featuring natural language voice logging, multimodal receipt OCR parsing, and an interactive contextual chatbot.
- Implemented a robust RESTful architecture utilizing context-window injection to process unstructured user data into structured transaction objects and personalized "Monthly Wrapped" summaries.
- Constructed the end-to-end application utilizing Python, Flask, vanilla JavaScript, and the google-generativeai SDK, optimizing API routes for seamless, real-time interaction with Gemini Flash models.

Student Success Analytics Platform | Docker, FastAPI, Streamlit, Pinecone, MongoDB, CI/CD)

[Github Link](#)

- Engineered a containerized hybrid RAG platform parsing multi-format academic resources to generate high-yield exam insights, interactive revision notes, and custom study timelines.
- Architected a decoupled microservice layout via automated Git CI/CD pipelines, seamlessly integrating a FastAPI backend container, Streamlit frontend client, Pinecone vector index, and MongoDB cache.
- Optimized live cloud infrastructure performance by refactoring bulk uploads into memory-efficient sequential streams (`gc.collect()`) and building an exponential backoff handler to eliminate transient API drops.

AgriSmart-Advisor(Multimodal Agricultural Risk Index) | Python, Flask, TensorFlow, Scikitlearn)

[Github Link](#)

- Engineered a fullstack agricultural decision-support system that synthesizes structured soil metrics, natural language symptom reports, and leaf imagery into a unified, mathematically defined Agricultural Risk Index (ARI).
- Developed three independent machine learning pipelines utilizing an ensemble Random Forest (99.55% accuracy) for crop suitability, a TF-IDF Logistic Regression model for text-based disease detection, and a fine-tuned MobileNetV2 CNN (97.4% Top-1 accuracy) for visual pathology classification.
- Architected a decoupled RESTful architecture with a Flask backend fusion engine and a responsive React frontend, utilizing Supabase for authentication and history tracking to deliver real-time, actionable farming advisories.

Certifications & Achievements

IBM DevOps Software Engineering Professional Certificate -IBM
