Summary

CS Engineering student at KIIT (2027 graduate) specializing in scalable backend systems and intelligent AI/ML applications. Passionate about engineering robust solutions using Python, Java, and RESTful architectures, with hands-on experience building GenAI tools and enterprise-level applications. Driven to bridge the gap between complex algorithms and real-world software.

Experience (Internship)

Software Development Intern – [Prodevans Technologies Pvt. Ltd.](#)

May 2026 – Present

- Developed AI-powered backend services for ZTrust IAM using Python and FastAPI, enabling intelligent query handling, document verification, and workflow automation.
- Built OCR and multi-document verification pipelines with fraud detection, field extraction, entity matching, and consistency validation across identity and financial documents.
- Integrated local LLMs (Ollama, Llama 3.2) into modular backend architectures for automated verification, metadata analysis, and AI-assisted recommendation systems.
- Architected enterprise RAG solutions for ZTrust and Keycloak documentation by evaluating recursive document ingestion, semantic chunking, embeddings, and retrieval strategies.

Education

Kalinga Institute Of Industrial Technology

July 2023 - Jun 2027

B.Tech. in Computer Science and Engineering

CGPA: 8.58

Relevant Coursework: Oops, DBMS, DSA, OS, Computer Networks, ML/AI, Software Engineering & Project Management

Skills

- Languages:** Python, Java, SQL, JavaScript
- Web & Backend:** Spring Boot (Basic), Flask, FastAPI, REST API Development, JSON Handling, Microservices Architecture, HTML, CSS
- ML/AI:** Scikit-learn, TensorFlow, Keras, Pandas, NumPy, NLP, CNN, TF-IDF, LLM Workflows, Prompt Engineering
- Databases:** MySQL, PostgreSQL, SQLite, Pinecone, MongoDB
- Developer Tools:** Git, GitHub, GitHub Copilot, Linux/Shell Scripting, Postman, Jupyter Notebook, VS Code
- Cloud Software Engineering:** SDLC, Agile Scrum, CI/CD Fundamentals, Docker (Basic)

Projects

FinWise - AI Financial Copilot | Python, Flask, Google Gemini API, SQLite, JavaScript)

[Github Link](#)

- Engineered a full-stack AI expense tracking platform featuring natural language voice logging, multimodal receipt OCR parsing, and an interactive contextual chatbot.
- Implemented a robust RESTful architecture utilizing context-window injection to process unstructured user data into structured transaction objects and personalized "Monthly Wrapped" summaries.
- Constructed the end-to-end application utilizing Python, Flask, vanilla JavaScript, and the google-generativeai SDK, optimizing API routes for seamless, real-time interaction with Gemini Flash models.

Student Success Analytics Platform | Docker, FastAPI, Streamlit, Pinecone, MongoDB, CI/CD)

[Github Link](#)

- Engineered a containerized hybrid RAG platform parsing multi-format academic resources to generate high-yield exam insights, interactive revision notes, and custom study timelines.
- Architected a decoupled microservice layout via automated Git CI/CD pipelines, seamlessly integrating a FastAPI backend container, Streamlit frontend client, Pinecone vector index, and MongoDB cache.
- Optimized live cloud infrastructure performance by refactoring bulk uploads into memory-efficient sequential streams (`gc.collect()`) and building an exponential backoff handler to eliminate transient API drops.

PharmaTrace (a Medicine Authenticity & Cold Chain Monitoring Platform)

2026-Present

[Github Link](#)

- Building a cloud-native polyglot microservices platform using Spring Boot, FastAPI, MySQL, and JWT authentication to address medicine counterfeiting through QR-based verification.
- Developed Auth and Drug Registry services with secure REST APIs and database integration, while implementing ML-based anomaly detection using Isolation Forest.
- Performed API, authentication, and integration testing using Postman to validate service interactions across microservices.

Certifications & Achievements

IBM DevOps Software Engineering Professional Certificate -IBM

[Link](#)

SDLC, Agile, Git/GitHub, Linux, Docker, Kubernetes, CI/CD, Microservices, API Testing,

AWS Cloud Foundations – Amazon Web Services

[Link](#)

Core cloud concepts, AWS services, security, and architecture fundamentals.

Machine Learning A-Z [2026]: ML, DL & AI – Udemy

[Link](#)

Supervised/unsupervised learning, NLP, neural networks, and deep learning using Python and R.

ICDCIT 2026 Conference Volunteer -KIIT University (Communication, Teamwork, Event Coordination)

[Link](#)

LeetCode -Solved 150+ DSA Problems
